## Data sheet

### DA09

Differential pressure measuring unit  
Pressure levels PN10/PN25

Diaphragm manometer  
CrNi-steel model

# 1 Product and functional description

## 1.1 Performance features

### Areas of application

- Chemical, petrochemical industry
- Process technology
- Marine and offshore technology
- Power plant technology
- Mechanical and plant engineering

### Important features

- Highly corrosion resistant
- CrNi-steel model
- Use with aggressive media
- Highly durable
- Variable connection technology
- With fluid filling as an option
- Optional additional equipment such as contact element or rotation angle encoder

## 1.2 Function diagram

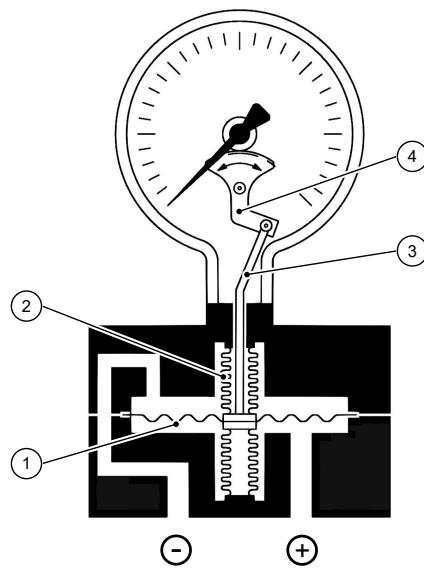

Fig. 1: Function diagram

1 Measuring diaphragm	2 Bellows
3 Tie rod	4 Motion train

## 1.3 Design and mode of operation

The measuring system comprises a diaphragm and two separate pressure chambers. Differential pressure between the chambers causes axial movement of the diaphragms. A tie rod transfers this movement to an indicator.

The seal between the pressure chamber and tie rod is realised with metal bellows. To compensate the static operating pressure, the measuring system is symmetrical.

## 1.4 Equipment versions

The illustrations are just examples. The equipment features can be combined according to the order code.

### Pressure load

Idle load	Scale upper value
Alternating load	Scale upper value
Overload capability on one side (+) and (-)	10 x Scale upper value ≤ PN

### 2.3 Measurement accuracy

Accuracy class	1.6
Characteristic curve deviation	± 1.6 % of the measuring range (FS)
Temperature influence (Reference + 20°C)	± 0.8 %FS / 10K
Influence of static pressure for measuring ranges (MBR) < 250 mbar	≤ 0,1 % + $\frac{0,004 \%}{MBR [\text{bar}]}$
Influence of static pressure for measuring ranges (MBR) ≥ 250 mbar	≤ $\frac{0,1 \%}{\text{bar}}$

### 2.4 Operating conditions

Permissible ambient temperature	-20 ... +80 °C
Admissible storage temperature	-20 ... +80 °C
Admissible media temperature	≤ 100 °C
Type of protection	IP 66 acc. to EN 60529

### 2.5 Construction design

#### Materials

	Material	Material no.
Bayonet ring housing NG100, NG160	CrNi steel	1.4301, 1.4404
Safety housing	CrNi steel	1.4404
Process connection	CrNi steel	1.4404
Motion train	CrNi steel	
Dial face and needle	Aluminium, painted, printed	
Inspection disk	Safety laminated glass	

#### Parts in contact with the medium

	Material	Material no.
Pressure chamber	CrNi steel	1.4404
Diaphragm MB ≤ 160 mbar	CrNi steel	1.4571
Diaphragm MB ≥ 250 mbar and ≤ 6 bar	NiCrCo alloy	DURATHERM®
Diaphragm MB ≤ 10 bar	NiCr. alloy	INCONEL® 718
Bellows	NiCr. alloy	Alloy 625
Seal	Metal seal	

#### Process connection

	Material	Material no.
Connecting piece and port	CrNi steel	1.4404
Cutting ring screw connections	CrNi steel	1.4571

## Electrical connection

In the case of devices with additional electronic equipment, the connection is realised using a cable socket attached to the side and/or with a Han 7D connector on the power plant models. The pin assignment depends on the ordered mode and is stated in the data sheet KE or KE09.

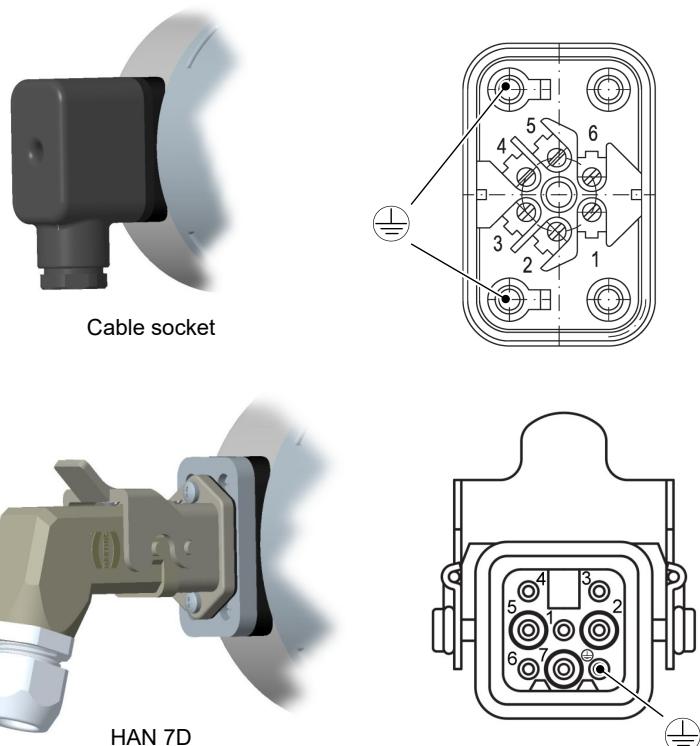

Fig. 4: Cable socket

### Cable socket

Number of screw terminals	6 + 2PE
Rated current	See data sheet KE
Rated voltage	250 V
Cable diameter	up to 1.5 mm <sup>2</sup> with wire protection
Cable screw connection	M20 x 1.5, terminal range 7 ... 13 mm

### HAN 7D

No. of crimp contacts	7 + PE
Rated current	See data sheet KE
Rated voltage	50 V
Cable diameter	1 mm <sup>2</sup>
Cable screw connection	M20 x 1.5, terminal range 7 ... 13 mm

## Assembly

Direct assembly	Mounted to the pipes
Wall mounting	Flanged assembly plate
Pipe mounting	Flanged assembly plate and attachment bracket
Mounting position	Vertical
Weight	Depending on the version 2,7 ... 7 kg

## Additional Attachments

### Contact elements

Limit signal transmitters (contacts) and capacitive rotation angle transducers with an output signal proportional to the angular position can be fitted into a housing augmented by a corresponding bayonet ring connector.

A certain minimum pressure level is required to operate this kind of contact element, which is why there is a lower limit for the mbar measuring ranges. This limit depends on the model type and is stated in the section ‚General‘.

The measuring deviation increases by  $\pm 0.5\%$  per contact when the contacts are driven and switched.

For more information and the order key, please refer to the data sheet:

- for limit switch in data sheet KE
- for rotation angle converter in the data sheet KE09

### Fluid charging

Under aggravated operating conditions, such as vibrations and extreme pressure fluctuations, or in order to avoid condensation forming if used outdoors, the casing can be filled with the following fluids depending on the type of contacts installed:

without contacts	Paraffin oil, glycerine, silicon oil
Low-action contacts	Paraffin oil, silicon oil
Magnetic spring contacts	Silicon oil
Inductive contacts	Paraffin oil, silicon oil
Rotation angle transducer	no filling possible

### Marker needle

A settable red marker can be attached to the scale to clearly show a certain pressure (limit value).

### Trailing needle

The trailing needle is 'dragged' with the measured value indicator. As there is no fixed connection between the two needles, one-off maximum values are stored. The trailing needle can be reset using an adjusting dial in the window. Trailing needles cannot be used in conjunction with contacts. A certain minimum pressure level is required to move the drag indicator, which is why there is a lower limit for the mbar measuring ranges. This limit depends on the model type and is stated in the section ‚General‘.

### Shut-off fitting

Three-spindle equalisation and shut-off valve DZ93 or four-spindle equalisation and shut-off valve DZ94.

- Material 1.4404
- Functions: Shut-off, pressure compensation
