## 1.2 Intended use

The DE90 is a differential pressure transmitter with additional switch outputs. It is suitable for measuring overpressure, under-pressure and differential pressure in neutral gaseous media.

The device may only be used for the purpose stipulated by the manufacturer. The manufacturer will not be liable for damage arising from incorrect or improper use.

### 1.2.1 Use in safety-related systems (SIL, PL)

#### **WARNING**

##### Exceptions

Devices with a Modbus or IO-Link interface must not be used in safety-related systems.

All other models may be used in safety-related systems.

For use in safety-related systems in accordance with “Functional Safety” (SIL) or “Functional Safety for Machines” (PL), the correct functioning of the safety function must be verified. You will find the necessary key figures, safety instructions, installation and maintenance instructions in the Safety Manual.

The Safety Manual is available for download via the following link:

<https://www.fischermesstechnik.de/de/produkte/details/de90>

### 1.2.2 Explosion hazard area classification

#### Eurasian Economic Union (EAC):

The device does not have ATEX approval for this market. It may only be used there as an industrial device.

#### 1.2.2.1 Gas explosion protection

Devices with the order code **DE90 ### ## ## # 0 # 000 R1 # #** are suitable as 'Electrical equipment for use in potentially explosive areas', Zone 2 - Gases and vapours.

Designation as per Directive 2014/34/EU:

 II 3G Ex ec IIC T4 Gc

#### 1.2.2.2 Dust explosion protection

Devices with the order code **DE90 ### ## ## # 0 # 000 R1 # #** are suitable as “Electrical equipment for use in areas with combustible dust”, Zone 22 - dry dusts.

### 1.2.3 External application

If the device is intended for outdoor use, we recommend permanently protecting the membrane keypad against UV radiation and using a suitable enclosure or at least the erection of a sufficiently dimensioned canopy as a protection measure against constant rain or snow.

### 1.3 Function diagram

Fig. 1: Function diagram

### 1.4 Design and mode of operation

The device is based on a piezoresistive sensor element that is suitable for measuring overpressure, under-pressure and differential pressure. The pressures to be compared have a direct effect on a silicon membrane equipped with a measuring bridge.

When the pressure is equal, the measuring membrane is in its idle state. If a pressure difference occurs, the membrane is deflected and a resistance change takes place on the attached measuring bridge. This change is evaluated by the device's electronics and transformed into the display and up to four switch contacts.

Options:

The device can be equipped with up to two analogue outputs. The optional output signal can be dampened, spread, inverted and transformed via a table function even if it is nonlinear.

The device can be equipped either with a Modbus RTU interface or, alternatively, with an IO-Link interface.
